**EXAMINER'S AMENDMENT**

1. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. § 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee.

2. The application has been amended as follows:

(a) in claim 1, line 7, the term "to face a magnetic storage medium" has been changed to --to face said magnetic storage medium-- because the magnetic storage medium already mentioned in line 4;

(b) similarly, in claim 19, line 8, the term "to face a magnetic storage medium" has been changed to --to face said magnetic storage medium-- because the magnetic storage medium already mentioned in line 5;

(c) furthermore, in claim 37, line 5, the term "about a magnetic storage medium" has been changed to --said magnetic storage medium--; and

(d) in the abstract, lines 13-15, the term "The amount of rotation ..... which produced by the magnetically stored data on the magnetic storage medium." has been deleted so that the abstract is within 250 words.

**REASONS FOR ALLOWANCE**

3 Claims 1-41 are allowable over the prior art of record.

4. The following is an Examiner's Statement of Reasons for Allowance:

In reading a high density magneto-optical storage medium, a conventional optical head rotates a polarized light beam about 0.35 degree. To obtain a bigger rotation angle for more reliable and faster detection, applicant claims means and steps of an optical head having both a Faraday rotator layer and a Kerr effect rotator layers on a transparent substrate where both said rotator's rotating coefficient has a same operational sign at the wavelength of said light beam.

The prior art does not teach or fairly suggest the features as recited in applicant's claims.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kurtz et al. (5,235,570) is pertinent because Kurtz teaches a magneto-optic readout method using polarization switching of readout beam.

6. Any response to this action should be mailed to:
